

Noor Kids AI Academy

AI For Kids - 16-Class Curriculum

Course Duration: 1 Month | 4 Classes per Week

Mon, Wed, Sat, Sun at 8:00 PM (PKT)

Platform: Google Meet | Format: 90% Practical + 10% Theory

Course Overview

Welcome to the Noor Kids AI Academy 16-class journey into the world of Artificial Intelligence. This curriculum has been carefully designed for kids and young students aged 7 to 16+ years, with a clear focus on practical, hands-on learning. Every single class ends with a small project that students can share with their family, friends, and classmates. We believe children learn AI best by building with AI, not just by listening to lectures about it. That is why our course follows a 90% practical and 10% theory format - students spend most of each 45-minute session actually creating, experimenting, and problem-solving with real AI tools that are free and accessible on any laptop or mobile phone.

The course runs for 1 month with 4 classes per week (Monday, Wednesday, Saturday, and Sunday at 8:00 PM PKT) via Google Meet. By the end of these 16 classes, your child will have built a portfolio of 10+ real AI projects including AI images, storybooks, talking avatars, posters, music tracks, short videos, chatbots, vision models, mobile apps, dashboards, websites, and more. The final class is a showcase event where students present their best work to parents and receive a "Junior AI Creator" certificate. This curriculum document lists the learning objectives, topics covered, and practical activity for each of the 16 classes so parents and students know exactly what to expect every step of the way.

Course Name	AI For Kids
Total Classes	16 (including Introduction and Final Expo)
Duration	1 Month
Schedule	Mon, Wed, Sat, Sun at 8:00 PM (PKT)
Class Length	45 minutes per class
Platform	Google Meet (link shared before class)
Format	90% Practical + 10% Theory
Fee	500 PKR per month (via Easypaisa)
Requirements	Laptop/Computer preferred, mobile phone also supported
Language	Urdu + English (bilingual)
Certificate	"Junior AI Creator" on course completion

The 16 Classes

Each class below is a complete 45-minute session. Classes build on each other - later classes use skills and outputs from earlier ones. By Class 16, students will have a complete portfolio of AI projects to showcase.

Class 1

Introduction to AI

Learning Objectives

- Understand what Artificial Intelligence means in simple, relatable terms
- Identify AI tools already used in daily life (YouTube, maps, voice assistants)
- Build curiosity and confidence about learning AI as a creative skill, not magic

Topics Covered

- What is AI? Real-life examples around us
- How AI learns from data (simple analogy: training a pet)
- Strong AI vs Weak AI - what we use today
- AI safety and ethics - the basics
- Tour of tools we will use in this course

Practical Activity

Students watch a short AI animation, then play a "Spot the AI" game - identifying which apps in their phone use AI. Each student shares one AI tool they already use. Group activity: draw "AI in my home" poster showing 3 smart devices.

Class 2

AI Tools & Prompts

Learning Objectives

- Learn what a "prompt" is and why good prompts make better AI outputs
- Use ChatGPT and DeepSeek to get useful answers
- Practice the 4-part prompt formula: Role + Task + Detail + Format

Topics Covered

- Introduction to ChatGPT, DeepSeek, Gemini, Copilot
- Anatomy of a good prompt - role, task, context, format
- Common prompt mistakes and how to fix them
- Iterating on prompts to improve results
- Free vs paid AI tools - what is enough for kids

Practical Activity

Students write 5 simple prompts in ChatGPT: a joke, a poem, a recipe, a homework tip, and a story idea. Then they rewrite each prompt using the 4-part formula and compare results. Individual project: create a "Prompt Cheat Sheet" with 3 favorite prompts.

Class 3

Image Creation with AI

Learning Objectives

- Generate high-quality images using free AI image tools
- Understand how text-to-image AI interprets descriptive words
- Learn to iterate prompts to refine image style and content

Topics Covered

- Bing Image Creator (DALL-E powered) - free, no login
- Leonardo AI for advanced styles (cartoon, sketch, watercolor, 3D, cyberpunk)
- Prompt tips for images: subject + style + mood + lighting
- Same prompt, 5 styles - comparing outputs
- Saving and downloading AI images

Practical Activity

Each student generates 3 images of "a robot in a Pakistani school" - changing one word each time (happy robot, helpful robot, colorful robot). Group project: each group builds an "AI Art Gallery" with 5 images on one theme (Space, Jungle, Future City). Gallery is shared via Google Slides.

Class 4

Story Book Creation

Learning Objectives

- Use AI to write a structured 4-page children story
- Match AI-generated images to story text
- Combine text and images into a complete digital storybook

Topics Covered

- Story structure: title, characters, problem, solution
- Prompting ChatGPT for age-appropriate stories (100 words per page)
- Generating matching illustrations with Bing Image Creator
- Assembling storybook in Google Slides
- Reading stories aloud - voice and pace

Practical Activity

Each student writes their own 4-page story with the prompt: "Write a children story about [topic]". Then generates one matching picture per page using Bing Image Creator. Pastes everything into Google Slides. Group project: combine all member stories into one "Class Storybook" and read one page aloud each.

Class 5

Avatar Creation

Learning Objectives

- Create a talking avatar from a photo or text
- Use AI text-to-speech to make avatars speak
- Understand use cases: education, news, accessibility

Topics Covered

- Adobe Express Avatar (free, no login) - text to talking character
- Scratch text-to-speech block - simple programming approach
- Choosing avatar style: realistic, cartoon, animal
- Writing short scripts for avatars (15-30 seconds)
- Exporting avatar videos for sharing

Practical Activity

Each student creates an avatar that says: "Hello, my name is [name]. I love AI!" Then the avatar says one thing the student learned about AI so far. Group project: build a "News Channel" where each avatar reports one AI news fact (e.g., "AI helped NASA find a new planet").

Class 6

AI Presentations & Posters

Learning Objectives

- Create AI-powered slide presentations in minutes
- Design posters with AI text-to-image and templates
- Learn layout principles: big text, clear image, one message

Topics Covered

- Canva AI text-to-image for posters and slides
- Microsoft Designer for instant poster creation
- Gamma.app / Tome for AI slide decks
- Poster design rules: contrast, hierarchy, white space
- Adding stickers, icons, and big letters for kid appeal

Practical Activity

Each student designs a poster for their school AI Club using Canva AI (prompt: "AI helps us learn"). Includes a robot drawing, big title, and one-line tagline. Group project: design three posters together - 1) AI Safety, 2) AI Creativity, 3) AI Future. Posters are presented to the class.

Class 7

AI Music & Audio

Learning Objectives

- Use AI to compose original melodies and background music
- Understand how AI generates music from patterns
- Export and use AI audio in other projects

Topics Covered

- Chrome Music Lab Song Maker - draw your melody, AI completes it
- Beatoven (free tier) - 20 seconds of background music
- Suno AI for full songs with lyrics (free tier)
- Tempo, mood, and genre selection
- Downloading audio as MP3 for use in videos

Practical Activity

Each student creates a "Robot Theme Song" using Chrome Music Lab - drawing a 16-note melody and letting AI complete it. Downloads as MP3. Group project: combine 3 members sounds into a 1-minute "AI Band" track using online audio joiner.

Class 8

AI Video & Animations

Learning Objectives

- Create short AI videos with script, voice, and footage
- Convert static images into animated videos
- Plan and storyboard a 15-second video

Topics Covered

- CapCut (free) - AI script, stock footage, AI voiceover
- Image-to-video tools (Runway ML free tier, Pika Labs)
- Storyboarding: 3 frames for 15 seconds
- Adding captions, music, and transitions
- Exporting and sharing short videos

Practical Activity

Each student makes a 15-second video titled "AI is awesome because..." using CapCut. They write the script with ChatGPT, add AI voiceover, pick stock footage, and add background music from Class 7. Group project: produce a 1-minute video "AI makes life better" showing a robot helping a child.

Class 9

Build a Chatbot (No Code)

Learning Objectives

- Design and launch a working chatbot without coding
- Understand chatbot flows: question, intent, response
- Deploy a chatbot that can answer real questions

Topics Covered

- Landbot (free tier) - visual chatbot builder
- Voiceflow for conversational AI design
- Intent mapping: what will users ask?
- Default responses and fallbacks
- Embedding chatbot on a website or sharing link

Practical Activity

Each student builds a "Fruit Shop Bot" that answers 3 questions: "How much is an apple?", "Do you have bananas?", "Thank you!" Individual project: build a "Homework Helper Bot" that gives one tip for math or Urdu. Group project: each group makes a "Classroom Assistant Bot" and other groups test it.

Class 10

AI Sees (Computer Vision)

Learning Objectives

- Train an AI model to recognize images using webcam
- Understand how AI "sees" patterns in pictures
- Evaluate AI accuracy with simple tests

Topics Covered

- Teachable Machine by Google (free, web-based)
- Image classification: 2-class and 3-class models
- Training data: taking 30+ photos per class
- Testing model accuracy
- Exporting model to use in Scratch or web

Practical Activity

Each student trains Teachable Machine to recognize "thumbs up" vs "peace sign" using webcam. Individual project: train it to see "pen" vs "pencil". Group project: build a "Rock-Paper-Scissors" classifier - show your hand to webcam, AI guesses the move.

Class 11

Mobile Apps Basics

Learning Objectives

- Build a working mobile app without writing code
- Understand app components: button, image, label, classifier
- Test an app on a real Android phone

Topics Covered

- MIT App Inventor - free, drag-and-drop app builder
- Personal Image Classifier extension for AI vision
- App layout: vertical/horizontal arrangements
- Logic blocks: when button click, do something
- Live testing via MIT AI2 Companion app

Practical Activity

Each student follows step-by-step: take 10 photos of an apple, 10 photos of a banana, train the app to say "Apple" or "Banana" when pointed at fruit. Individual project: train app to recognize pet vs toy (or pencil vs eraser). Group project: each group builds a "Fruit Recognizer" and tests on real fruits.

Class 12

AI Translate & Voice

Learning Objectives

- Use AI to translate between Urdu and English
- Generate natural-sounding AI voices in multiple languages
- Create multilingual content for diverse audiences

Topics Covered

- Google Translate - text and speech translation
- TTSMaker for free AI voice generation
- Translation accuracy and limitations
- Multilingual greeting cards and posters
- Accessibility: AI voice for visually impaired

Practical Activity

Each student translates "My name is [name]" from Urdu to English and back using Google Translate. Uses TTSMaker to make a voice say "I love AI" in 3 languages. Individual project: record a 20-second Urdu sentence, use AI to translate to English. Group project: create a "Multilingual Greeting Card" with English, Urdu, and Pashto/Sindhi.

Class 13

Dashboards & Data with AI

Learning Objectives

- Visualize data using AI-assisted dashboard tools
- Understand charts: bar, line, pie, and when to use each
- Tell a story with data

Topics Covered

- Google Looker Studio - free dashboard builder
- Asking AI to suggest chart types from data
- CSV data from Google Sheets - import and visualize
- KPI cards, filters, and date ranges
- Designing a clean dashboard: layout and colors

Practical Activity

Each student creates a simple dashboard in Google Looker Studio showing "My Week" - hours of study, screen time, sleep. Uses ChatGPT to suggest the best chart for each metric. Individual project: design a "Class Attendance Dashboard" with 4 KPI cards and 2 charts.

Class 14

Websites with AI

Learning Objectives

- Build a complete website using AI website builders
- Understand website structure: header, sections, footer
- Publish a website live on the internet for free

Topics Covered

- Google Sites - free, simple, no coding
- AI-assisted copy writing for website sections
- Embedding images, videos, and links
- Site navigation and mobile responsiveness
- Publishing and sharing the website link

Practical Activity

Each student builds a 3-page Google Site about themselves or a hobby: Home, About, Gallery. Uses ChatGPT to write the About section. Embeds AI-generated images from Class 3. Individual project: design a "My AI Journey" website showcasing all projects made so far in the course.

Class 15

AI Ethics, Safety & Fake News

Learning Objectives

- Understand the ethical use of AI in daily life
- Identify fake news and AI-generated misinformation
- Learn 3 rules for safe and responsible AI use

Topics Covered

- Face swap technology and its risks
- How to spot fake news: source, date, evidence, logic
- AI bias and fairness - real examples
- Privacy: what not to share with AI tools
- The 3 rules: no lying, no teasing, ask permission

Practical Activity

Teacher shows 4 AI-made headlines - 2 true, 2 fake. Students guess using Google search and common sense. Individual project: use FaceApp age filter to see "you at 60" and discuss feelings. Group project: create a poster "3 Rules for Using AI Faces" - no lying, no teasing, ask permission. Plus "How to spot fake news" poster with 3 tips.

Class 16

Final Expo & Certificates

Learning Objectives

- Showcase all projects created during the course
- Practice presentation and communication skills
- Receive course completion certificate

Topics Covered

- Project showcase - each student presents 1 favorite project
- Parent attendance and live demo
- Peer voting: Most Creative, Most Useful, Best Group Work
- Feedback session - what worked, what to improve
- Certificate distribution: "Junior AI Creator" award

Practical Activity

Each student presents their best project from the course to the class and any attending parents (online via Google Meet). 3-minute presentation: what they made, how they made it, what they learned. Class votes for Most Creative, Most Useful, Best Group Work. Every student receives a "Junior AI Creator" certificate and feedback for next steps.

How to Enroll

Enrollment is simple and affordable. The total course fee is just 500 PKR per month, payable via Easypaisa to 0333-1250524. After payment, send a screenshot of the confirmation on WhatsApp

to the same number along with your child's name and age. Our team will confirm the slot and share the Google Meet link for the first class. You can also fill the Google Form at <https://forms.gle/6zrK2VQrJgERrB717> to register your interest, and we will contact you within 24 hours. We offer a free demo class for new students so you and your child can experience the teaching style before committing - just message us on WhatsApp to book a demo slot.

Why Choose Noor Kids AI Academy

Unlike traditional computer courses that focus on theory and typing, our curriculum is built around real AI tools that professionals use every day - ChatGPT, Bing Image Creator, Canva AI, Teachable Machine, MIT App Inventor, and many more. Your child will not just hear about AI; they will use it to create images, write stories, build chatbots, design posters, compose music, make videos, and even develop a working mobile app. The bilingual teaching (Urdu + English) ensures every child understands the concepts clearly, regardless of their English proficiency. With small class sizes, individual attention, and a project-based approach, we make sure no child is left behind. By the end of the month, your child will not only understand AI - they will be teaching you how to use it.
